#### 3. The learners' details:

| Field of study:                | Expected degree Level: | Number of learners: |
|--------------------------------|------------------------|---------------------|
| Health Education and Promotion | Ph.D                   | 3                   |

**The course main goal:** To develop and disseminate knowledge about health education and promotion models and inculcation of their sound application in practice.

### The course objectives:

- 1. To familiarize the students with principles of learning theories.
- 2. To provide the students with the knowledge, skills, and dispositions necessary to apprehend relationship between health education and health literacy.
- 3. To familiarize the students with the population risk continuum.
- 4. To give the students an overview about breadth and complexity of intrapersonal health behaviour theories to be used in practice settings.

**Teaching style:** The hybrid style including demonstrating/ delegating and facilitating styles.

**Learners' tasks**: Listing and/or brainstorming, comparing, problem-solving, sharing personal experiences and storytelling, peer tutoring, fishbowl activity, active participation in quescussion, field visit activities.

The learners' assessment/evaluation method(s): Formative and summative assessment including assessment of attendance and timekeeping, learner participation in class discussions, giving oral or written feedbacks in class, completing and submitting assignments and final examination.

The mid/final exams' structure and questions distribution: The final exam will include at least two open/close ended questions from the topics discussed in the whole semester sessions that determine 12/20 score of the student total grade. The quality and content of the assignments will appoint 5/20 and class activities 3/20 scores of the total grade.
